Images of TEVAR (thoracic endovascular aortic repair) for an aortic aneurysm rupture carried out in a Phillips hybrid suite after a sudden technical failure with total system shut-down. A Zeihm mobile C-arm brought in from a nearby semi-hybrid suite was used to continue the TEVAR, with subclavian embolization with PHIL embolization agent and coils for complete seal and ongoing bleeding. Figure 1 shows the C-arm beside the hybrid suite arm that was moved manually cranially. Figure 2 shows the embolization with PHIL and coils on the mobile C-arm screen. The procedure was successfully completed as planned and the patient recovered.
Ethics Statement

(1) All the authors mentioned in the manuscript have agreed to authorship, read and approved the manuscript, and given consent for submission and subsequent publication of the manuscript.

(2) The authors declare that they have read and abided by the JEVTM statement of ethical standards including rules of informed consent and ethical committee approval as stated in the article.

Conflicts of Interest

The author declares that they have no conflicts of interest.

Funding

The author(s) received no financial support for the research, authorship, and/or publication of this article.
